

Session 8	Microbial protein transition players
Pitch Title	Protein production platform
Company	myBIOS GmbH
Speaker	Claudia Rinnofner
Keywords feedstock	
Keywords technology	Pichia pastoris, Methanol-free
Keywords End-Product	Alternative proteins and enzymes

Abstract:

myBIOS offers solutions to produce proteins and enzymes, relying on precision fermentation and the yeast *Pichia pastoris*. Based on license-free tools and in-house developments, myBIOS has developed its own production platform. Alternatives to animal proteins are particularly in demand! For the food and feed industry, myBIOS relies on methanol- and antibiotic-free processes. Since 2022, myBIOS has been successfully supporting customers with strain development. In 2024 myBIOS focuses on the implementation of an automated protein production platform that enables individual selection of tools and scales. In addition, we invest in process development and production equipment to be able to accompany our customers from strain to product.
